Customer Problem Statement Template:

Customers visiting the garage face delays because appointments and vehicle service details are recorded manually. There is no proper tracking of service status, spare parts availability, or past service history. As a result, customers do not get timely updates, technicians struggle to find information, and billing becomes slow and inaccurate. Customers expect a faster and more transparent service experience.

To solve this, a Salesforce-based Garage Management System is needed to track appointments, maintain service history, manage spare parts inventory, and generate bills automatically. This will reduce waiting time, improve communication, and increase customer satisfaction.

EXAMPLE:

Customer Problem (What is happening?) Expected Solution (What they want?)

Appointments and vehicle details are written manually, which causes confusion, missing records, and delays. Store all appointments and service details in Salesforce so the garage can easily view customer information and track work.

Billing and spare part usage are calculated manually, which leads to mistakes and customer complaints. Generate bills automatically and track spare parts in Salesforce to avoid errors and improve customer satisfaction.

✓ **Simple Explanation of the Example:**

Problem 1: The garage writes customer and vehicle details in notebooks or WhatsApp. This causes confusion because details may get lost.

Solution: Salesforce can store all customer and service details in one place so the staff can see everything clearly.

Problem 2: Billing and spare parts are calculated manually. This often leads to errors and arguments with customers.

Solution: Salesforce can calculate bills automatically and track spare parts, so the process becomes fast and accurate.
